Firefactories (SK), which are capable of plasminogen (PG) activation, and fibrin binding regions of human fibronectin, which are from fibrin binding regions of human fibronectin, which are from fibrin binding domains (FBD) 4 and 5 or 1 and 2. The hybrid PA possesses the ability to bind with fibrin independently and also characteristically retains a PG activation ability which becomes evident only after a pronounced duration, or lag, after exposure of the PA to a suitable animal or human PG. The hybrid streptokinase-fibrin binding domain colypeptides are useful in thrombolytic therapy for various kinds of cardiovascular disorders. The hybrids have enhanced fibrin selectivity as well as kinetics of plasminogen activation that are distinct from that of natural streptokinase in being characterised by a temporary delay, or lag of several minutes in the natural rate of the catalytic conversion of plasminogen to plasmin (i.e. delayed-action thrombolysis). The proteins can bind tightly with fibrin in blood clots soon after introduction into the vascular system without significantly activating the circulating can bind tightly with fibrin in blood clots soon after introduction into the vascular system without significantly activating the circulating plasminogen activation encountered during clinical use overcomes systemic plasminogen to the site of pathological thrombus. This overcomes systemic plasminogen activation encountered during clinical use of streptokinase. (Updated on 15-SEP-2001 to standardise OS field) plasminogen activator (PA) \$

This sequence represents a chimeric streptkinase-fibrin binding domain (SK-FBD) protein coding sequence. The invention relates to a hybrid plasminogen activator (PA) comprises a polypeptide thision between streptokinase (SK), which are capable of plasminogen (PG) activation, and fibrin binding regions of human fibronectin, which are from fibrin contains (FBD) 4 and 5 or 1 and 2. The hybrid PA possesses the ability to bind with fibrin independently and also characteristically retains a PG activation ability which becomes evident only after a pronounced duration, or lag, after exposure of the PA to a suitable animal or human PG. The hybrids have enhanced fibrin selectivity as cardiovascular disorders. The hybrids have enhanced fibrin selectivity as well as kinetics of plasminogen activation that are distinct from that of natural streptokinase in being characterised by a temporary delay, or lag capaminus in the natural rate of the catalytic conversion of plasminogen to plasmin (i.e. delayed-action thrombolysis). The proteins can bind tightly with fibrin in blood clots soon after introduction into the vacular system without significantly activating the circulating the catalysis of the vascular system without significantly activating the circulating characterial and the natural activation the catalysis of the vascular system without significantly activating the circulating the circulating the circulating the circulating than the matural than the matural than the matural activation of the vascular system without significantly activating the circulating than the matural than the matural than the matural activation of the vascular system without significantly with the paracterial activation of the paracterial activation of the vascular system without significants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             blood plasminogen to plasmin, thus aiding in the localisation of the plasminogen activation process to the site of pathological thrombus. This overcomes systemic plasminogen activation encountered during clinical use of streptokinase. (Updated on 15-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hybrid streptokinase-fibrin binding domain polypeptides useful for thrombolytic therapy comprises a streptokinase fused with fibrin binding domains of human fibronectin.

The present invention describes an isolated bacterial protein that induces fibrin-dependent plasminogen activation in a pharmaceutical composition for dissolving blood clots. Also described are: (1) a composition comprising an isolated modified streptokinase, the modification being removal of amino acid residues in the amino terminus; composition comprising a blood clot in a subject, comprising administering to the subject a fibrin-dependent streptokinase protein; a daministering to the subject a fibrin-dependent streptokinase protein; a nucleic acid (I) encoding a modified bacterial streptokinase; (3) an composition comprising (I); and (4) a host cell transformed with the the expression vector comprising (I); and (4) a host cell transformed with the the composition comprising a bacterial fibrin-dependent plasminogen activator is useful for dissolving to bacterial fibrin-dependent plasminogen activator is useful for dissolving composition, venous thrombosis pulmonary embolism, cerebral thrombosis, infarction, venous thrombosis pulmonary embolism, cerebral thrombosis, composition of infarction, venous thrombosis pulmonary embolism, cerebral thrombosis, composition of fibrin than in the absence of fibrin. The modified streptokinase can plasminogen is at least 10-fold, preferably 100-fold grader in activates a streptokinase has at least one amino acid substitution that inactivates a cubstrate site for proteolytic cleavage. This reduces the rate of degradation of the streptokinase at least two-fold. The present sequence composition and altose binding protein fusion protein from

This sequence represents a streptokinase-NTRN (SK-NTRN) gene (where NTRN stands for N-terminally repaired with native sequence). The invention relates to a hybrid plasminogen activator (PA) comprises a polypeptide fusion between streptokinase (SK), which are capable of plasminogen (PG) activation, and fibrin binding regions of human fibronectin, which are created the probability to bind with fibrin independently and also constructed the ability to bind with fibrin independently and also characteristically retains a PG activation ability which becomes evident constructed animal or human PG. The hybrid streptokinase-fibrin binding constructed animal or human PG. The hybrid streptokinase-fibrin binding constructed animal or human PG. The hybrid streptokinase-fibrin binding constructed as well as kinetics of plasminogen activation that are distribute from that of natural streptokinase in being characterised by a temporary delay, or lag of several minutes in the natural rate of the catalytic conversion of plasminogen to plasmin (i.e. delayed-action thrombolysis). The proteins can bind tightly with fibrin in blood clots soon after introduction into the vascular system without significantly activating the circulating blood plasminogen to plasmin, thus aiding in the localisation of the plasminogen activation encountered during clinical use conservances systemic plasminogen activation encountered during clinical use conservances systemic plasminogen to the site of pathological thrombus. This overcomes systemic plasminogen activation encountered during clinical use conservances of the proteins conservances systemic plasminogen activation encountered during clinical use conservances.

This sequence represents the human Streptococcus equisimilus streptokinase coding sequence. The invention relates to a hybrid presents of plasminogen activator (PA) comprises a polypophide fusion between streptokinase (SK), which are capable of plasminogen (PG) activation, and streptokinase (SK), which are capable of plasminogen (PG) activation, and considered by prid AP possesses the binding domains (PBD) 4 and 5 or 1 and 2. The hybrid PA possesses the ability to bind with fibrin independently and also characteristically retains a PG activation ability which becomes evident only after a pronounced duration, or lag, after exposure of the PA to a suitable animal or human PG. The hybrid streptokinase-fibrin binding domain polypeptides are useful in thrombolytic therapy for various kinds of cardiovascular disorders. The hybrids have enhanced fibrin selectivity as well as kinetics of plasminogen activation that are distinct from that of cardiovascular streptokinase in being characterised by a temporary delay, or lag of several minutes in the natural rate of the catalytic conversion of plasminogen to plasmin (i.e. allayed-action thrombolysis). The proteins can bind tightly with fibrin in blood clots soon after introduction into the vascular system without significantly activating the circulating blood plasminogen activation process to the site of pathological thrombus. This overcomes systemic plasminogen activation encountered during clinical use considered busing clinical use considered businese. (Updated on 15-SEP-2003 to standardise OS field)

                                    The DNA encodes an FB-FB dimer linked to the streptokinase coding sequence. The FB fragment has selective affinity for fibrin, low affinity for fibrinogen, and minimal immunogenicity, imparting thrombus-targetting capability. See also AAQ11649 and AAQ11650
                                                                                                                                                                                                                                                                           597

The present invention describes an isolated bacterial protein that induces fibrin-dependent plasminogen activation in a pharmaceutical composition for dissolving blood clots. Also described are: (1) a composition comprising an isolated modified streptokinase, the modification being removal of amino acid residues in the amino terminus; composition comprising a blood clot in a subject, comprising cadministering to the subject a fibrin-dependent streptokinase protein; a nucleic acid (1) encoding a modified bacterial streptokinase protein; a concern comprising (1); and (4) a host cell transformed with the expression vector comprising (1); and (4) a host cell transformed with the cheerial fibrin-dependent plasminogen activator is useful for dissolving concernal fibrin-dependent plasminogen activator is useful for dissolving infarction, venous thrombosis pulmonary embolism, cerebral thrombosis, caraft thrombosis and arterial thrombosis. The modified streptokinase can also be used in non-human mammanls. Streptokinase activation of plasminogen is at least 10-fold, preferably 100-fold grader in activates a streptokinase has at least one amino acid substitution that inactivates a cubstratt site for proteolytic cleavage. This reduces the rate of degradation of the streptokinase at least two-fold. The present sequence concerns an encoded plasminogen native streptokinase at least two-fold. The present sequence of fibrin that streptokinase at least two-fold. The present sequence of encodes native streptokinase at least two-fold. The present sequence of encodes native streptokinase (nSK).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a fusion protein or a conjugate comprising a vasodilator polypeptide, or its active fragment, and a thrombolytic polypeptide or its active fragment. The protein is useful for treating a subject suffering from a partially or totally occluded blood vessel, causing unstable angina, acute myocardial infarction or stroke. The polymucleotide encoding the polypeptide is useful in gene therapy. The vasodilatory action of the protein allows for the use of lower doses of thrombolytic, and the use of lower doses of the thrombolytic, and the use of lower doses of the thrombolytic, and the use of lower doses of the thrombolytic reduces associated side effects. The present sequence is the streptokinase CDNA used in the construction of a Maxadilan-Streptokinase fusion protein. Maxadilan is a vasodilator peptide produced by the salivary gland of the New World sand fly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               99

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             6054
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6234
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a fusion protein or a conjugate comprising a vasodilator polypeptide, or its active fragment, and a thrombolytic polypeptide or its active fragment. The protein is useful for treating a subject suffering from a partially or totally occluded blood vessel, causing unstable angina, acute myocardial infarction or stroke. The polymucleotide encoding the polypeptide is useful in gene therapy. The vasodilatory action of the protein allows for the use of lower doses of a thrombolytic, and the use of lower doses of the thrombolytic, and the use of lower doses of the thrombolytic, and the use of lower doses of the thrombolytic, and the use of lower doses of the thrombolytic reduces associated side effects. The present sequence is the plasmid used for the preparation of Maxadilan-Streptokinase fusion protein. It contains maxadilan cDNA, which encodes a vasodilator peptide produced by the salivary gland of the New World sand fly, and streptokinase cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              597
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         657
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   717

in which at least one of the amino acids in the ProS8-Ly859-Ser60-Ly861 segment of the corresponding native SK is replaced by another amino acid. The present sequence encodes native SK is replaced by another amino acid. The present sequence encodes native SK. SK is a secretory protein of haemolytic Streptococcus able to activate human plasminogen (HPlg) to plasmin (HPlm), which is a serine protease able to catalyse the hydrolysis of fibrin in blood clots. The SK is useful as a thrombolytic agent in the treatment of vascular thromboembolyric symptoms such as acute myocardial infarction. Compared with wild-type SK, the KS9E mutant is more resistant to degradation by human plasmin and is more effective both in acting as a fibrolytic agent and in activating human plasminogen. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    838 ATTGATTTTGCAAGCGATGCAACCATTACTGATCGAAACGCCAAGGTCTACTTTGCTGAC 897

The present invention describes a mutant streptokinase (SK) polypeptide in which at least one of the amino acids in the Pro58-Lys59-Ser60-Lys61 segment of the corresponding native SK is replaced by another amino acid. The present sequence encodes mutant SK K59E. SK is a secretory protein of haemolytic Streptococcus able to activate human plasminogen (HPPg) to plasmin (HPlm), which is a serine protease able to catalyse the hydrolysis of fibrin in blood clots. The SK is useful as a thrombolytic agent in the treatment of vascular thrombombolytic symptoms such as acute myocardial infarction. Compared with wild-type SK, the K59E mutant is more resistant to degradation by human plasmin and is more effective
                         plasma clot; hydrolysis; haemolytic Streptococcus; plasminogen; plasmin, serine protease; fibrin; blood clot; thrombolytic; vascular thromboembolytic symptom; acute myocardial infarction; fibrinolysis; resistance; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             is more resistant to degradation by human plasmin and is more ellective both in acting as a fibrolytic agent and in activating human plasminogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   241 AAGGCTATTCAAGAACAATTGATCGCTAACGTCCACAGTAACGACGACTACTTTGAGGTC

This sequence represents a streptokinase-NTR (SK-NTR) gene (where NTR stands for N-terminally repaired with native sequence). The invention relates to a hybrid plasminogen activator (PA) comprises a polypeptide (fusion between streptokinase (SK), which are capable of plasminogen (PG) activation, and fibrin binding demains (FBD) 4 and 5 or 1 and 2. The hybrid PA comprises the ability to bind with fibrin independently and also characteristically retains a PG activation ability which becomes evident only after a pronounced duration, or lag, after expoure of the PA to a suitable animal or human PG. The hybrid streptokinase-fibrin binding comin polypeptides are useful in thrombolytic therapy for various kinds of cardiovascular disorders. The hybrid streptokinase-fibrin binding as well as kinetics of plasminogen activation that are distinct from that of natural streptokinase in being characterised by a temporary delay, or lag of several minutes in the natural rate of the catalytic conversion of plasminogen to plasmin (i.e. delayed-action thrombolysis). The proteins can bind tightly with fibrin in blood clots soon after introduction into the vascular system without significantly activating the circulating can bind tightly with fibrin in blood clots soon after introduction into the vascular system without significantly activating the circulating overcomes systemic plasminogen co the site of pathological thrombus. This overcomes systemic plasminogen co the site of pathological thrombus. This overcomes systemic plasminogen co the site of pathological thrombus. This overcomes systemic plasminogen coultaring on standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence encodes the wild type plasminogen-binding fragment of streptokinase. The protein fragment encoded by this sequence was used in the design of a modified streptokinase has an in vitro degradation rate at least 2 times slower than that of native streptokinase. Compounds containing modified streptokinases are specifically used as thrombolytic agents for dissolving blood clots in vivo in a mammal, preferably at a dose of 20000 U/kg, opt. as a bolus rather than by continuous infusion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence of the synthetic hirudin HV-1 genes was designed based on the published amino acid sequence (Dodt J., et al FEBS Letters 165 180 chromosomal The sequence of streptokinase was obtd. from PCR amplified chromosomal DNA from S. equisimilis ATCC 10009 or ATCC 9642. The primers used for the PCR were based on the pub- lished DNA sequence of S. 497-362 [1985]). The two sequences were used to construct an expression vector in which the hirudin gene is linked to the streptokinase gene via a linking sequence encoding a cleavage site for factor Xa. The factor Xa is present at the site of the target thrombus so the active agents are released specifically at the place where clot formation is occurring. The invention relates to a DNA vector (A) for stable transformation and expression of genes (I) in plastids, where (I) is inserted in an artificial intergene region (AIR) formed by combining two 5'-untranslated regions (5'-UTRS) of genes that transcribe in different directions and are derived from plants of different divisions or classes. (A) are used to produce transplastomeic anglosperms that have improved agronomic properties (e.g. resistance to biotic or abiotic stress) or express a very wide range of agricultural, veterinary, pharmaceutical, nutritional or industrial products, e.g. enzymes, vaccinating antigens, cytokines or immunoglobulins. Use of (A) eliminates the need for a transposon for gene insertion, inserted genes do not require promoters and terminators, and applicability. Also any selection marker in (A) can be eliminated by chomologous recombination. (A) provides efficient and stable expression of genes without causing any functional alterations. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2082

```
Properties: Streptokinase gene
The gene product binds to human plasminogen
The gene product is an activator of human plasminogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1017

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1, Application US/07703778D

Patent No. 5295366

GENERAL INFORMATION:

APPLICANT: Garcia,M.P.E. et al

TITLE OF INVENTION: METHOP FOR THE ISOLATION AND EXPRESSION

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTIDE SEQUENCE

TITLE OF INVENTION: OF A GENE WHICH CODES FOR STREPTORINASE, NUCLEOTION OF A GENE WHICH CODES FOR STREPTORINA OF THE SEQUENCE OF THE STREPTORINA OF THE SEQUENCE OF T
                                                                                                                                          1245
                                                                                                                                                                                                                                                             1305
                                                                                                                                                                                                                                                                                                                                                                                                                                      1035
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1425
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1095
